Full Stack BI Developer

Skills

Business Intelligence

As of now, I have two years of BI development under my belt. I have worked with 3 different clients, developing solutions and solving problems in TIBCO's Spotfire, Tableau and Microsoft Power BI. The next BI tool to learn on my list is Qlik.

ETL

I have adequate experience in report automation from relational databases. For me, business data is always intriguing. I made good use of my knowledge on my previous projects, since I am investing in international stocks for over 8 years. I am becoming more and more familiar with Hadoop.

Python + Front-End

Recently I could implement Highchart and d3 JS visualization libraries into Spotfire. I strongly think BI will move in this direction in the future. Aside from that, I find Python's capabilites of predictive analytics staggering. I have started to explore Python data science libraries such as NumPy and Pandas.

Tools

Spotfire	Oracle DB	d3
Tableau	MSSQL	Highcharts
Power BI	Hadoop	Python data science

Experience

EPAM Systems - BI Developer / Software Engineer

1.5 years

BI development, Data Analysis and Consultancy are my main focus areas with the above mentioned BI tools, with additional ETL and Front-End development. EPAM's company culture helps me to gain experience with the latest technologies and use them on various projects.

Morgan Stanley - Data Analyst

6 months

Delivering automated and ad-hoc reporting on incoming and internal metrics, based on requests from the senior management or other teams.

GE Healthcare - Productivity Tools Intern

1 year

Project management support, database management, trend analysis, communication with both vendors and users. Our team's responsibility was to find ways to reduce telecommunication expenses within GE Healthcare.

Education

The Corvinus University of Budapest

Faculty of Business Administration

Bachelor's of Science - 2017
